14	2023-02-08	Benedikt Zinn	Felix Hilgers	Everyone else		Georgina Goldschmidt	Demo day!
15	2023-02-15	Felix Hilgers	Benedikt Zinn	Everyone else		Georgina Goldschmidt	Retrospective
Product owners, software developers, and Scurm Master are set and ideally don't change over time; the critical part is the Release Manager role you need to define here							

Goals	Development of a visual perception system for robots with an accuracy of >= 90%
Meeting norms	Zoom-Meetings in the meeting room of the university. Joining the meeting is mandatory, with exceptions (like sickness, etc.). As an exception, showing up to 10 minutes late is fine if the team is informed via discord. Happiness Index: has to be completed at the end of the meeting (amos happy). Stand-up-mails: containing -> things done, problems encountered, things up next. -> For SDs: min 2x per week -> For POs: min 1x per week
Working norms	Issues on Github in the “Feature board” project of the repository. Definition of Done: If specified in the issue that the feature has to be tested, tests have to be written for that feature, documented (in code or later in the wiki) Git-branches: The latest commit on the main-branch has to be tagged. Only 2 “in progress” tickets per person at one time.
Coordination norms	Developers can create issues but not put them onto the “Feature board”. If blocked by a different task, discuss it as soon as possible. Communication should happen via Discord & mail. Criticism should be constructive. Language should be respectful at all times, both verbal and written communication.
Communication norms	Developers can create issues but not put them onto the “Feature board”. If blocked by a different task, discuss it as soon as possible. Communication should happen via Discord & mail. Criticism should be constructive. Language should be respectful at all times, both verbal and written communication.
Consideration norms	
Cont. improvement norms	
Rewards	Online coffee or lunch meet at some point.
Sanctions	Document absence. Repeated absence is addressed with the missing person directly but will later be escalated to professors.
Signatures	
Scrum Master	Georgina Goldschmidt
Product owner	Felix Hilgers

Product owner	Benedikt Zinn
Software developer	Sarib Samdani
Software developer	Emil Badura
Software developer	Anuun Chinbat
Software developer	Paul Assenbaum
Software developer	Christoph Mantsch
Software developer	Zohreh Asadi

Product Vision	Project Mission
Optibot helps people when operating robots equipped with a single camera. It gives real-time distance estimates for known objects inside the field of view of said camera without relying on other sensors. The software stack is easy to integrate with already existing WebRTC based systems, making it easy to enhance existing robot networks.	The mission of this project is to create a containerized system that processes a WebRTC stream as an input and outputs a stream of metadata. This metadata will contain the objects detected in a certain frame of the video stream, their bounding boxes in the image & the estimated distance. This information can be overlayed over the existing video stream in a React component. All components of the project have well definied interfaces and can easily be integrated into existing architectures.

Term	Definition

Sprint #	Sprint goal
1	Meeting with industry partner and getting things started (and the T-shirt of course)
2	Start work on individual components and research unclear topics
3	Combining components into a first working prototype
4	Refining prototype and splitting out components
5	Finishing the Implementation of the Initial Architecture
6	Refine component parts
7	Improve Extensibility and Documentation
8	Refining the overall look and feel

Features						
1	**Meeting with industry partner and getting things started (and the T-shirt of course)**					
2	**Start work on individual components and research unclear topics**					
		Setup Architecture	5		5	
		Serve Webcam as WebRTC stream	5		5	
		Setup Initial CI Pipeline	3		3	
		Discuss Team Distribution Preferences	3		1	
3	**Combining components into a first working prototype**					
		Keep BOM up to date	2		2	
		Setup REUSE licensing	2		3	
		Update Architecture document	2		2	
		Create Object Detection Example	3		3	
		Prepare Build Process Review	2		2	
		Prepare Depth Estimation	5		5	
		Research Object and Depth Estimation	5		5	
4	**Refining prototype and splitting out components**					
		Metadata Transport	5		3	
		Split Backend Responsibilities	3		3	
		Improve Code Quality	5		5	
5	**Finishing the Implementation of the Initial Architecture**					
		Remove Redundant Calculations	3		3	
		Utilize Library for detecting Object dimensions	5		5	
		Create a React Video Component	3		3	
		Investigate and Fix startup TIme	5		3	
		Fix Windows Development setup	3		3	
		Create a React Video Overlay	3		3	
		Build Process Video	1		1	
		Update Container Images	2		0	
6	**Refine component parts**					
		Initialize Build/Deployment Documentation	3		1	
		Initialize Technical Documentation	3		2	
		Initialize User Facing Documentation	3		3	
		Setup and Test analyzing with Cuda and Rocm	3		3	
		Properly use CSS	2		2	
		Reduce Initial Connection Time	2		2	
		Automate SBOM Generation	3		5	
		Setup Docker Compose	3		3	
		Separate Model Downloading from Running	3		5

Sprint

#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
	Code has been reviewed by at least one SD	All Software Components are functioning	Architecture documentation has been updated
	Feature has been reviewed by at least one PO	Sprint release notes have been generated from all merge-requests since the last release	Tests exist for all mayor features
	Build scripts have been adapted if necessary	All container communication is working	All tests are passing
	CI Pipeline Passes		
	Code has been merged to main		
	BOM has been updated if necessary

How to play planning poker							
1. Everyone type their number into their value field, don't hit return yet							
2. Someone, perhaps a product owner, count down 3.. 2.. 1..							
3. Then, everyone hit return to submit their value							
						no cap yet
